

How to play iTunes M4P protected music with Nokia cell hone?

Software used: TuneClone M4P Converter

WEBSITE: <http://www.tuneclone.com>

OS: Windows XP/2000/Vista

The N95 is a music player. It supports MP3, WMA, RealAudio, SP-MIDI, AAC+, eAAC+, MIDI, AMR and M4A. Its two-way slider, when slid towards the keypad, allows access to its media playback buttons. A standard 3.5 mm jack is located on the left side of the phone and allows the user to connect any standard headphones to the unit; a user can also use Bluetooth for audio output using A2DP. The device features built-in stereo speakers. The N95 is also capable of playing videos through the included RealPlayer application. Videos can also be played through the TV-out feature. TV-out is a special graphics chip and companion utility that allows users to connect the smartphone using the supplied composite cable to any TV or audiovisual device. Its aim is to let you demo your photos and videos on a large screen, and so as the internet, video games and music features can also be used. The N95's built in UPnP capabilities allow the user to share the phones' digital media over a WLAN network. This provides easy access to the photos, music and videos stored on the phone and also enables media to be downloaded from other UPnP capable devices on the network.

The Nokia cell phone is also a music player. It supports MP3, WMA, RealAudio, SP-MIDI, AAC+, eAAC+, MIDI, AMR and M4A. But it could NOT play music files from iTunes Music store. If you have purchased some music files from iTunes store, and want to play on your Nokia cell phone, or some other mobile

devices than iPod and iPhone , such as microsoft Zune, Sony PSP, mp3 player etc. This guide may help.

Since the music files you purchased from iTunes stores are protected by DRM, you could NOT play them on your own mobile devices directly. And you could NOT also convert the DRM protected music files to MP3 or WMA directly with iTunes media player. However, iTunes allow you to burn the protected music files to CD-R or CD-RW disc to make a standard audio cd. TuneClone installs a virtual CD burner on your PC, and let you convert the protected music to unprotected MP3 files automatically.

TuneClone converts any DRM protected music files (such as M4P, M4A, WMA, M4B) and unprotected music (WMA, MP3, rax, MP4, WAV, RA, snd, OGG, aif) to plain MP3, WAV, WMA formats with Virtual CD-RW drive. It is a protected audio and music converter tool designed for virtually burning DRM protected music or audio files to a special virtual CD-RW drive where you can easily get plain MP3, WMA or WAV files ready for use on any computers or music devices.

TuneClone uses a virtual CD burning technology to simulate the burning and ripping process and can convert M4P files to MP3. So TuneClone is a M4P converter software. This amazing CD burner emulator easily automates the whole workflow for converting protected music or audio files to normal music files: ripping, burning, encoding are within only ONE click. This unique All-in-One feature helps TuneClone convert any DRM protected WMA, M4P music and M4B, MP3, rax, MP4, WAV, RA, snd, OGG, aif music to unprotected MP3, WAV, WMA formats at fast speed and high quality.

DRM Music Converter

Advanced legal converting technology includes virtual burning and virtual recording that can covert DRM audio to open MP3, WMA, OGG, WAV, AIFF and other types of audio formats, without cracking the DRM protection. These two approaches provide better solutions for converting DRM audio files without cracking any protection or breaking DRM regulations.

The most popular DRM audio converter utilizing virtual burning technology is TuneClone Audio Converter. It can **convert iTunes M4P, AAC, protected WMA to MP3 and unprotected WMA.**

TuneClone Audio Converter can also convert any other type of audio format to MP3, WMA and WAV.

Create unprotected copies of copy-protected audio files

Tired of DRM-protected file formats like WMA, M4P, M4B, MP4 getting in your way? TuneClone comes to the rescue! Just import protected WMA, M4P or any protected music files into TuneClone.

TuneClone automatically converts the music you have purchased online as you are burning it to a virtual CD-RW drive as unprotected audio (MP3, WAV or WMA) you can use anywhere. You can easily get unprotected MP3, WMA or WAV files ready for use on the virtual CD.

ByPass DRM protection from audio & music.

TuneClone does not crack DRM control. It bypass DRM control with a virtual CD-RW drive. Basically, protected files should not be copied and handed over to third parties. TuneClone qualifies to copy DRM protected music files. TuneClone acts as a virtual CD burner (CD-RW drive) and speeds the converting procedures by ripping any music files protected with the WMA, M4P, M4B formats and saving the music in TuneClone as unprotected MP3, OGG, WMA and WAV files. It's faster than any real CD or DVD burners. Through this process, a private copy is easily created only for personal use.

Flexible Media Library Management

TuneClone also helps make new media ready for inclusion in your media library. The title, artist and album name for every file are automatically stored in ID3 tags. TuneClone makes sure that, after the re-recording process is over, the new files also have all existing tag information. TuneClone supports ID3-tag formats like ID3v1 and ID3v2. Normalization inside TuneClone ensures media is converted at the uniform volume level of the entire media collection.

Support Various Audio Formats

Since TuneClone Audio Converter works as a virtual CD writer. It can convert almost all music format that your media player software support. It supports almost all media player software such as iTunes, Windows Media Player, RealOne Real Player, Napster.

TuneClone M4P to MP3 Converter supports options of WAV, MP3, WMA. You may custom the output options to meet your purpose.

TuneClone M4P to MP3 Converter unprotects and converts music files from any media player software if it supports CD burning features.

TuneClone M4P to MP3 Converter was written for converting M4P to MP3, M4A to MP3, M4B to MP3, WMA to MP3. So, with M4P to MP3 Converter, you can easily convert M4P to MP3, convert M4A to MP3, convert WMA to WAV, convert WAV to WMA, convert MP3 to WMA. Actually, TuneClone is an Any Audio Converter software tool!
